

370 Series Service Saddles All Stainless Steel

The Smith-Blair 370 line of stainless steel service saddles is uniquely designed for use on PVC pipe, but it can also be used on other types of pipe.

The saddles full circumference wide band of stainless steel wraps fully around the pipe to give total pipe support while providing the pipe with stability to prevent it from rocking or creeping, all without a crushing action.

The same superior sealing, pipe supporting stability on the pipe and easy installation qualities you have come to know and expect from other Smith-Blair Service Saddles are unchanged in this new corrosion protected, all stainless steel saddle.

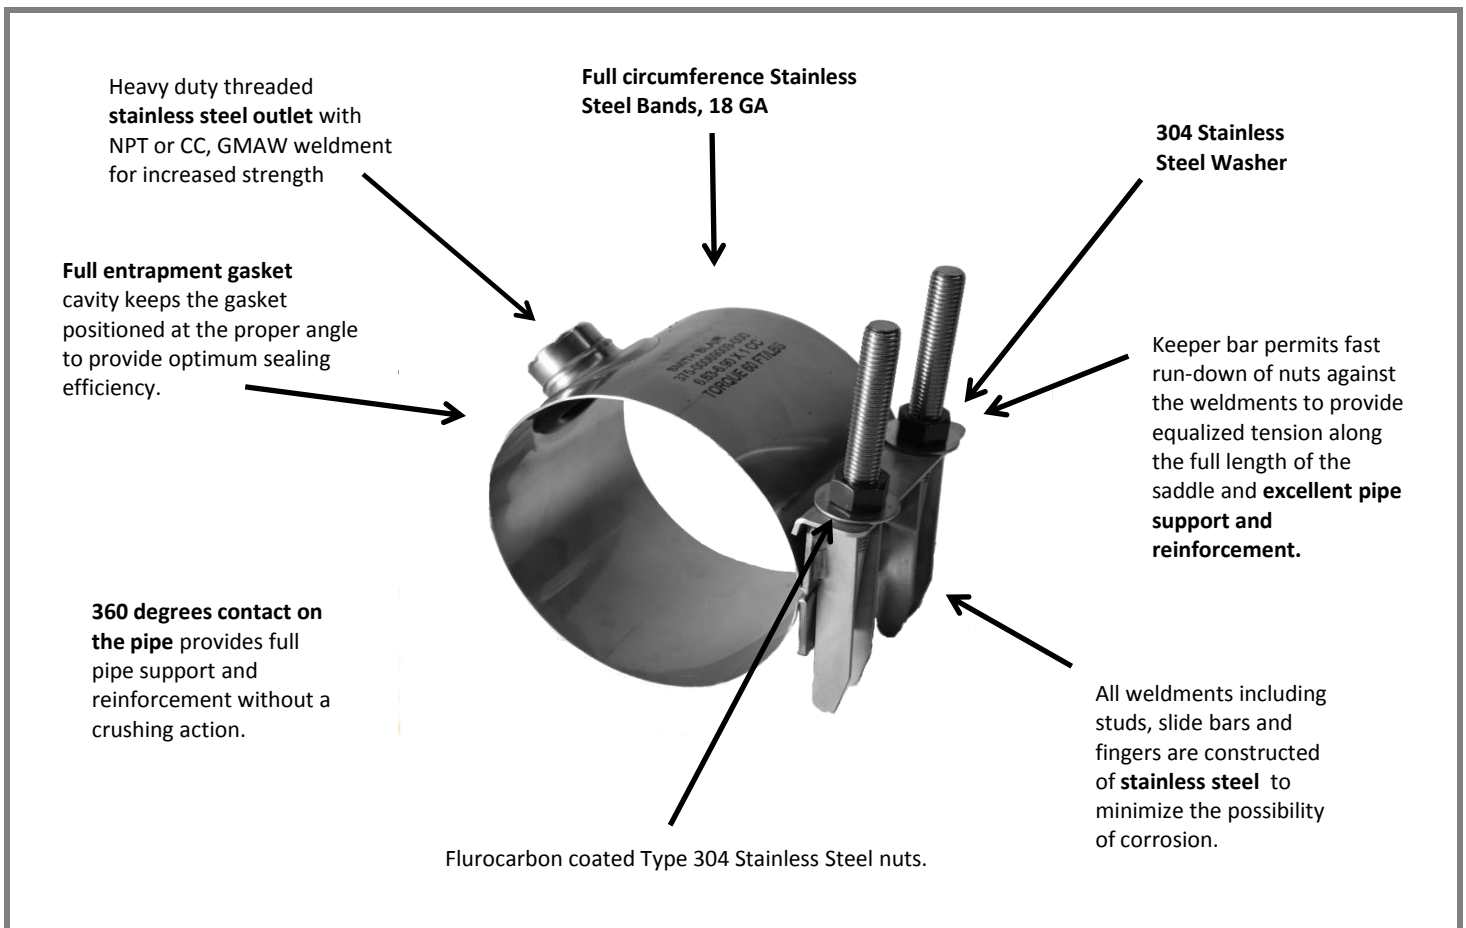

As the stud nuts are tightened, tangential pull direct mechanical forces toward and around the pipe, uniformly distributing pressure around its circumference, reinforcing it and supporting it without crushing action while providing unsurpassed sealing qualities.

Material Specifications

BAND:	Type 304 Stainless Steel, 18 GA.
SIDE BARS & FINGERS:	Type 304 Stainless Steel.
KEEPER BAR:	Type 304 Stainless Steel.
STUD BOLTS:	Type 304 Stainless Steel.
NUTS:	Type 304 Stainless Steel Fluorocarbon coating on threads.
WASHERS:	Types 304 Stainless Steel.
GASKET:	NBR NSF-61 Approved Gasket Optional EDPM on Request

Material specifications subject to change.
